

Boilerplate

Heidi's AI-powered medical scribe streamlines time-intensive administrative tasks to reduce the cognitive load on clinicians. Serving over a million patient interactions a week, Heidi's technology transcribes and processes conversations between clinicians and patients to produce clinical notes and follow-up materials – from referral letters to assessments. The tool allows clinicians to work more efficiently and focus more on patient care – reducing the risk of burnout.

Heidi adheres to international standards including the NHS, HIPAA, GDPR, and Australian Privacy Principles, and has obtained enterprise-grade security certifications such as SOC2 and ISO27001. The company does not store session recordings, and never shares or sells clinical data.

Founded in 2019 by a team of medical professionals, Heidi has raised a total of USD \$26 million to date, with backing from leading global investors. Today, Heidi powers over a million patient interactions every week, helping clinicians worldwide reduce administrative burden and focus on delivering high-quality care.
